

Job Description: Senior Software Engineer

Department: Engineering · **Employment Type:** Full-Time

Role Overview:

We are seeking a high-caliber Senior Software Engineer to lead the design, development, and maintenance of our core platforms. In this role, you will champion technical excellence, architect scalable distributed systems, and establish engineering best practices. You will collaborate closely with product managers, system architects, and cross-functional teams to translate complex business requirements into robust, high-performance applications.

Key Responsibilities:

- Architect, develop, and deploy highly scalable, reliable, and fault-tolerant cloud-native software platforms.
- Write clean, well-structured, maintainable, and highly optimized code while enforcing standards via reviews.
- Lead complex technical initiatives from inception to production deployment, choosing appropriate technology stacks.
- Own and optimize automated CI/CD deployment pipelines, infrastructure-as-code scripts, and containerized workloads.
- Guide, coach, and unblock junior and mid-level developers, promoting technical growth within the unit.

Required Qualifications & Skills:

- Minimum 5-8 years of professional software engineering experience building enterprise-grade, high-throughput systems.
- Mastery of at least one major modern backend language (e.g., Python, Java, Go, Node.js, C++).
- Hands-on experience with cloud infrastructure platforms, preferably AWS, Microsoft Azure, or GCP.
- Strong proficiency with relational databases (PostgreSQL, MySQL) and NoSQL solutions (MongoDB, Redis).
- Expert-level command over Docker, Kubernetes, Git, CI/CD systems, and agile Scrum execution models.
