

JOB DESCRIPTION

Technical Architect

Position Title:	Technical Architect	Department:	Enterprise Architecture / Engineering
Reports To:	Director of Engineering / Chief Architect	Employment Type:	Full-Time
Location:	Remote / Hybrid / On-site	Experience Level:	Senior / Lead (8+ Years)

Role Overview

We are seeking a visionary and highly skilled **Technical Architect** to lead the design, evolution, and structural integrity of our enterprise software ecosystems. In this role, you will bridge the gap between complex business requirements and high-performance technical execution. You will be responsible for defining architectural blueprints, evaluating emerging technologies, establishing robust engineering frameworks, and mentoring development teams. The ideal candidate possesses deep distributed systems expertise, stellar communication skills, and a proven track record of scaling cloud infrastructure to meet high enterprise demands.

Core Responsibilities

- **System Blueprinting:** Architect scalable, highly available, fault-tolerant, and secure distributed software and cloud infrastructures.
- **Technology Governance:** Define and enforce technical roadmaps, coding patterns, microservice architectures, and system integration strategies.
- **Cross-Functional Leadership:** Collaborate closely with Product Management, Engineering Leads, and DevOps stakeholders to translate business initiatives into viable technical matrices.
- **Prototype Development:** Build architectural spikes, Proof of Concepts (PoCs), and baseline frameworks to clear structural risks for execution teams.
- **Code & Architectural Reviews:** Conduct continuous systemic audits, design evaluations, and critical code reviews to preserve architectural guardrails.
- **Performance & Optimization:** Diagnose performance bottlenecks, scale database clusters, configure message queues, and optimize cloud infrastructure for cost and latency.
- **Technical Mentorship:** Serve as a technical guide and mentor to engineering squads, fostering a culture of technical excellence and continuous modern learning.

Required Technical Skills Matrix

Domain Competency	Expected Technical Stack & Proficiency
Languages & Frameworks	Java (Spring Boot), Go, Python, Node.js, or .NET Core Enterprise stacks.
Cloud & Infrastructure	AWS, Azure, or GCP; Terraform/OpenTofu (IaC), Cloud Architecture Patterns.
Containerization & Mesh	Docker, Kubernetes (EKS/GKE), Istio Service Mesh, Helm Charts.
Data & Caching Grids	PostgreSQL, MongoDB, Snowflake, Redis Clusters, Elasticsearch.
Streaming & Integration	Apache Kafka, RabbitMQ, RESTful APIs, gRPC, GraphQL Topologies.

Qualifications & Experience

- **Education:** Bachelor's or Master's degree in Computer Science, Software Engineering, or an equivalent technical field.
- **Professional Experience:** Minimum of 8+ years of total software engineering experience, with at least 3+ years acting in a dedicated Architectural or Tech Lead capacity.
- **System Scale Architecture:** Proven background managing architectural patterns for high-throughput, massive-scale systems (e.g., P99 latency controls, millions of active daily requests).
- **Methodologies:** Deep experience working within mature Agile, Scrum, and DevOps software production environments.
- **Certifications (Preferred):** AWS Solutions Architect Professional, Google Professional Cloud Architect, Azure Solutions Architect Expert, or TOGAF certification.

What We Offer

- Competitive base salary with equity options and performance bonuses.
- Comprehensive health, dental, and vision insurance packages with mental wellness allowances.
- Flexible remote/hybrid operational hours alongside dedicated workspace transformation stipends.
- Generous paid time off (PTO), parental leave, and regular organizational community rest periods.
- Annual continuous learning budget for architectural certifications, research materials, and global conferences.
